"Software development is not just a job; it's a passion that drives innovation."

Job Application for Junior Full Stack Developer

Dear Mr./Ms./Dr. LastName,

Why me?

Are you looking for someone who can confidently tackle both frontend and backend challenges? I am a Junior Full Stack Developer with hands-on experience in React, Angular, FastAPI, Spring Boot, and databases like MongoDB and PostgreSQL or MySQL. **I've built complete web applications** from scratch — including TaskProX, a collaborative task manager with authentication, permissions, Kanban board, and calendar integration — **demonstrating my ability** to turn complex ideas into functional products.

Why Your Company?

Does your company value innovation, collaboration, and building software with real impact? That's exactly the kind of environment I thrive in. I'm especially drawn to teams that foster creativity, promote continuous learning, and encourage mentorship. What truly motivates me is the challenge of **solving real-world problems**, turning ideas into functional features, and **working with others to build products that matter**—not just technically, but in the value they deliver to **users and businesses**.

Why now?

As I complete my Higher National Degree in Web Application Development, specializing in Blockchain, **I'm more motivated than ever** to apply my skills in real-world environments and continue learning alongside experienced developers. Over the past year, **I've gone beyond the classroom**—building full-stack projects like **TaskProX**, exploring DevOps with Docker, and mastering responsive UI with Tailwind. Now, **I'm ready to contribute to a forward-thinking company**, bringing energy, adaptability, and a problem-solving mindset to help build solutions that truly make an impact.

Thank you for considering my application. I would be delighted to discuss my qualifications further and explore how I can contribute to your team.

Sincerely,

Alexandro Tellez
