*"Software development is not just a job; it's a passion that drives innovation."*

## Job Application for Junior Full Stack Developer

Dear Mr./Ms./Dr. LastName,

### Why me?

---

**Are you looking for someone who can confidently tackle both frontend and backend challenges?** I am a Junior Full Stack Developer with hands-on experience in React, Angular, FastAPI, Spring Boot, and databases like MongoDB and PostgreSQL or MySQL. **I've built complete web applications** from scratch — including TaskProX, a collaborative task manager with authentication, permissions, Kanban board, and calendar integration — **demonstrating my ability** to turn complex ideas into functional products.

### Why Your Company?

---

**Do you believe in innovation, collaboration, and creating impactful software?** So do I. I'm particularly drawn to environments where creativity is encouraged, knowledge is shared, and mentorship is part of the culture. **I want to be part of a team** where I can contribute meaningfully while learning from experienced developers.

### Why now?

---

**As I finish my studies in Web Application Development** (specializing in Blockchain), **I am ready** to bring value to dynamic tech teams while continuing to grow. I actively take on new challenges, whether it's deploying with Docker, designing responsive UIs in Tailwind, or optimizing APIs. **My commitment** to continuous learning ensures I stay up to date with modern development practices and tools.

**Thank you for considering my application.** I would be delighted to discuss my qualifications further and explore how I can contribute to your team.

Sincerely,

**Alexandro Tellez**
